

VIII. Mini Project-Water Consumption Analytics

AIM:

To clean, analyze, and visualize water consumption data using Python and create meaningful visualizations to identify water usage patterns.

DOMAIN:

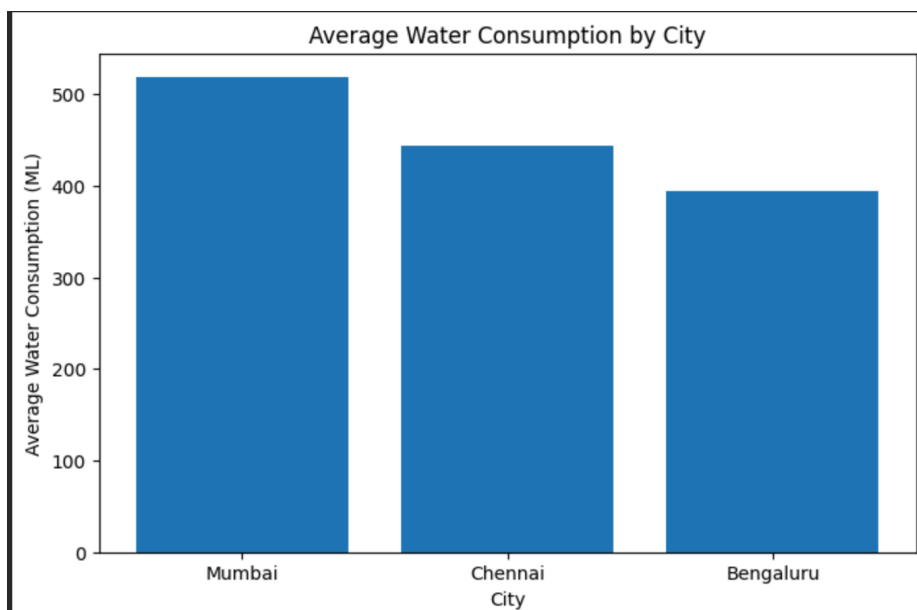

Water Consumption Analytics

PROBLEM STATEMENT:

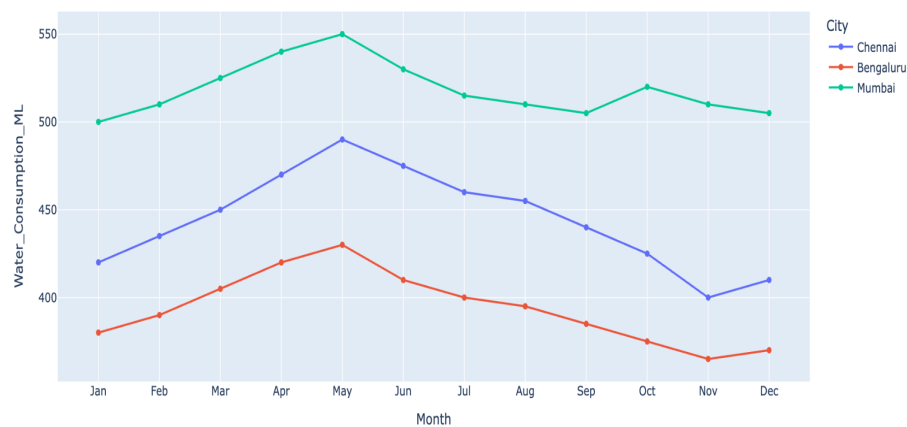

Water consumption varies across cities and months due to factors such as population, rainfall, and temperature. There is a need for a data-driven visualization system to analyze these factors and identify water consumption patterns.

OUTPUT:

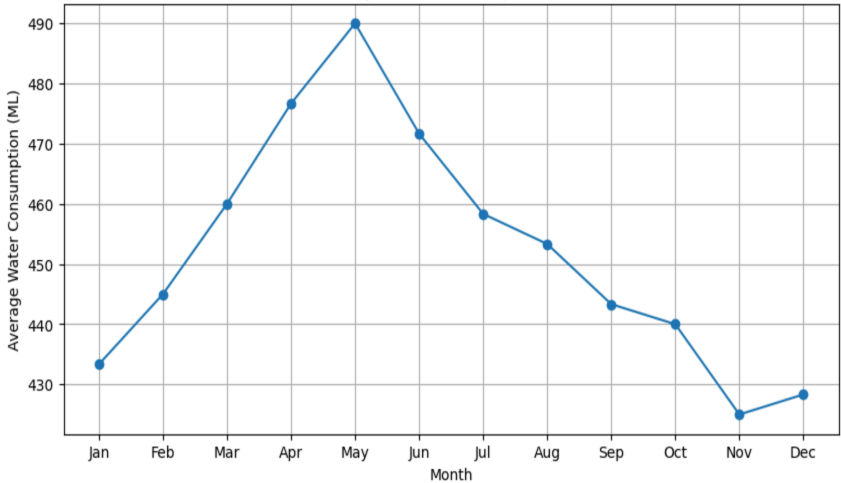

Python:

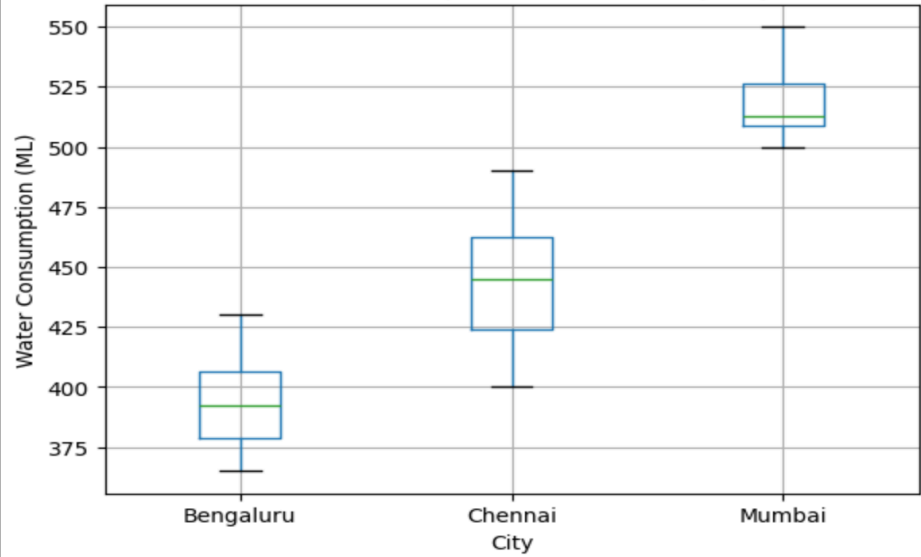

Interactive Monthly Water Consumption

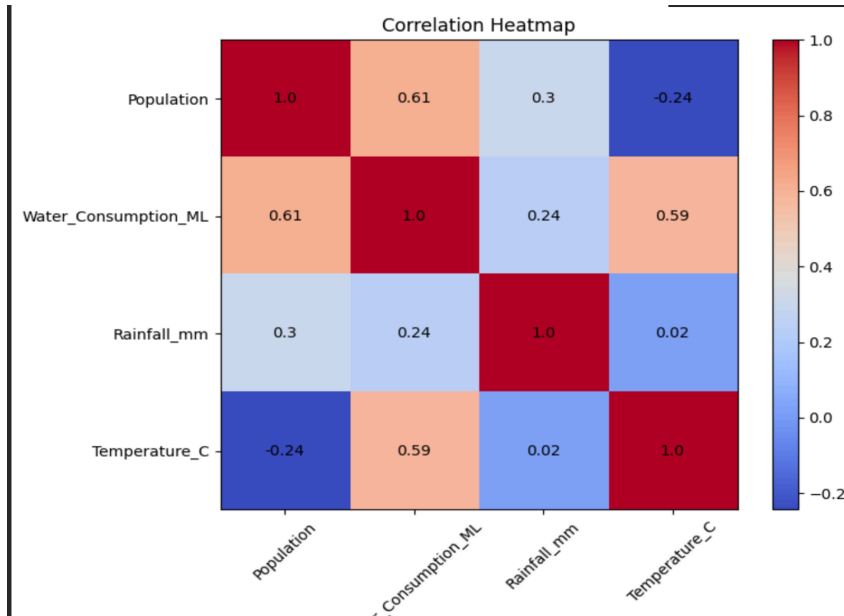

Monthly Water Consumption Trend

Water Consumption Distribution by City

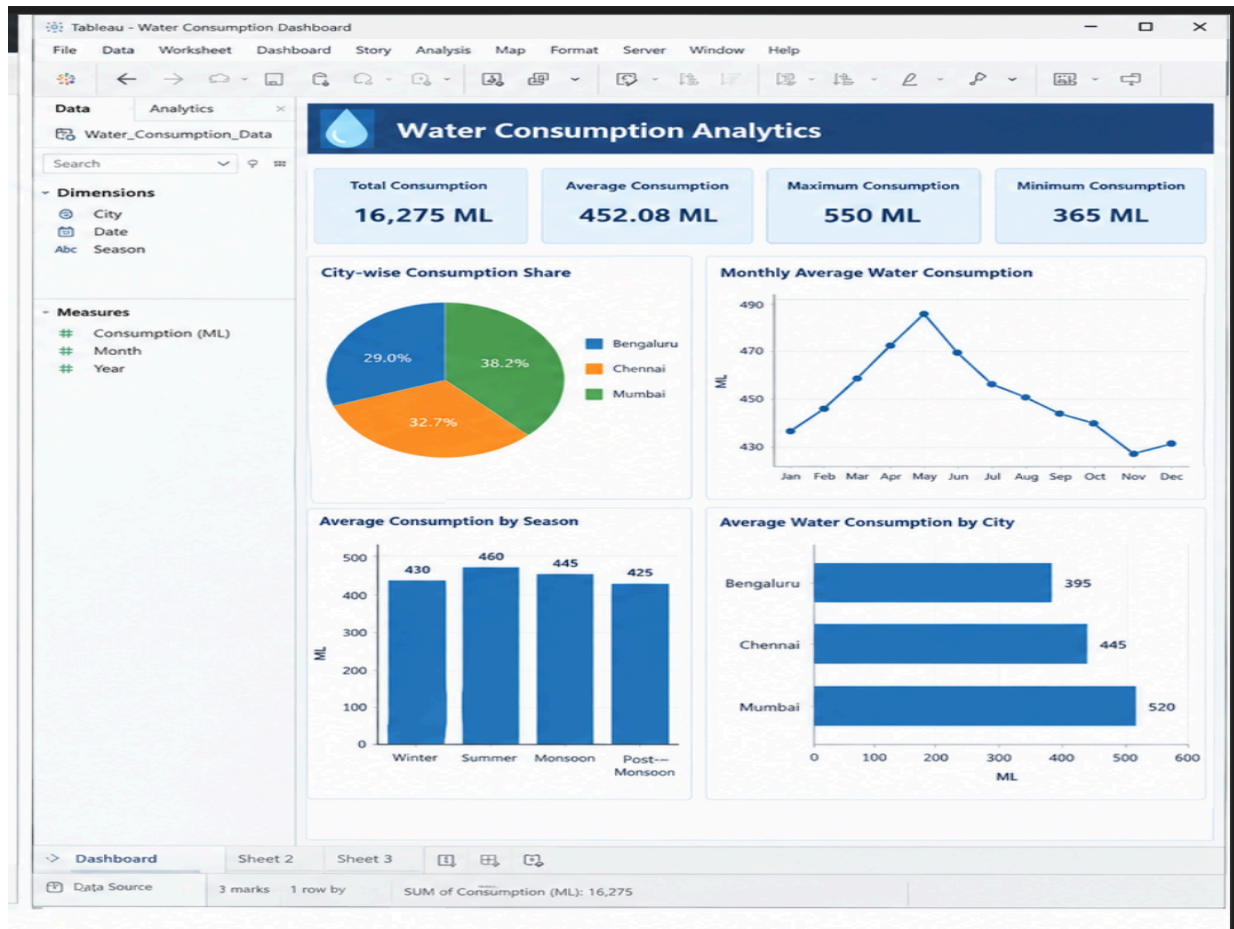

PowerBI:

Tableau:

RESULT:

Thus, the given program was written and executed successfully.
